"We are delighted to present these promising data before an audience of researchers and clinicians dedicated to elucidating the best possible combinations of targeted immunotherapies, to develop better treatments for patients with cancer. The data being presented highlight encouraging preclinical results, which show synergistic effects of a variety of antibody-based immunotherapies with our *Lm* Technology platform," said Robert G. Petit, Ph.D., Executive Vice President and Chief Scientific Officer of Advaxis.

#### **About Advaxis, Inc.**

Advaxis, Inc. is a late-stage biotechnology company focused on the discovery, development and commercialization of proprietary *Lm*-based antigen delivery products. These immunotherapies are based on a platform technology that utilizes live attenuated *Listeria monocytogenes* (*Lm*) bioengineered to secrete antigen/adjuvant fusion proteins. These *Lm*-based strains are believed to be a significant advancement in immunotherapy as they integrate multiple functions into a single immunotherapy and are designed to access and direct antigen presenting cells to stimulate anti-tumor T cell immunity, activate the immune system with the equivalent of multiple adjuvants, and simultaneously reduce tumor protection in the tumor microenvironment to enable the T cells to eliminate tumors. Advaxis has four franchises in various stages of clinical and preclinical development: HPV-associated cancers, neoantigen therapy, hotspot mutation therapy and prostate cancer.
